# How To Install Windows

If you are just beginning into the computer world, you have to try windows, windows is considered one of the first operating systems which was used by the masses, it was designed for the masses, but not by the masses of-course, I mean windows is not open source, it is closed source or Proprietary, which means its source code is not available to the public for scrutiny. Anyway, if you are staring out, please use Windows. In this guide, I will show you how to install Windows 10, which is the latest version of Windows which Microsoft, the company that owns and makes Window released in 2015. Microsoft said in a statement that Windows 10 will be the last of Windows ... So let's get started

STEP 1: Go to Microsoft website to Download the ISO file of Windows

Microsoft | Software Download   Windows ⌄   Windows Insider Preview ⌄   FAQ   All Microsoft ⌄   🔍   👤

Download Windows 10

Before updating, please refer to the **Windows release information status** for known issues to confirm your device is not impacted.

Windows 10 October 2020 Update

The Update Assistant can help you update to the latest version of Windows 10. To get started, click **Update now**.

STEP 2: Download The ISO File of Windows 10 and Flash it on a USB

Create Windows 10 installation media

To get started, you will first need to have a licence to install Windows 10. You can then download and run the media creation tool. For more information on how to use the tool, see the instructions below.

Download tool now

Privacy

⊕ **Using the tool to upgrade this PC to Windows 10 (click to show more or less information)**

⊕ **Using the tool to create installation media (USB flash drive, DVD, or ISO file) to install Windows 10 on a different PC (click to show more or less information)**

⊕ **More download options**

⊕ **Give feedback**

Now once you have downloaded the ISO file, download a free open source software called "Rufus" You can download it from a website https://rufus.ie and once you do that, plug in your USB and now open Rufus and in place of device select windows10, then in boot selection, choose your ISO file and select your preferred boot options which depends on you computer specs. Now once you do that click format. Wait for it to complete, use caution, once you format a USB, all data will be lost on it. Now once its done, let''s move on to the next step.

STEP 3: Plug in your USB and Boot into computer

Now once you do that, plug in your USB and now press f2 or del to enter you computer BIOS menu and now select to boot from your USB ... Now you enter Windows10 setup, click install or upgrade depending on what you want to do. Now enter your product key or just say you don't have one. Now once you do that, you will be greeted by a license. Agree with it, click install and wait. Once it is install Windows10, you are given an option to select what to share with Microsoft and next you have to wait for Cortana to set the computer up. Now, you can create or not create an account with Microsoft . Now you can finally start using Windows 10 ... Here are a few of apps Windows beginners to check out

Best WINDOWS 10 APPS TO CHECKOUT
1. Windows Photos App — Best Photo viewer for Beginners
2. Edge Browser — A browser which comes integrated with Windows10
3. VLC — Don't use Films and T.V, use VLC it is better
4. Windows Mail — Not as good as Thunderbird, but good enough
5. Groove Music — Best Music player which integrates well.
